- **Bachelor** – Faculté Polydisciplinaire de Khouribga, Khouribga, Morocco
From September 2016 to November 2019

SOME PROJECTS

Minishell A C implementation of a shell, offering features and syntax similar to Bash shell.

Transcendance Final project in the 42 cursus involves creating a full stack application. The frontend is built using Next.js, the backend is implemented with Nest.js, and PostgreSQL is chosen as the database. Additionally, Three.js is utilized for integrating a game component into the application.

IRC An IRC (Internet Relay Chat) server implemented in C++, facilitating real-time communication among users in chat rooms, with support for basic commands and user management.

Full Stack chat application A Full Stack chat app with Spring Boot (backend), Next.js (frontend), and PostgreSQL (database) for a responsive and real-time messaging experience.

Full Stack Task Management App A Full Stack app with JWT authentication, utilizing Spring Boot (backend), PostgreSQL (database), and Next.js (frontend) for a secure and dynamic user experience.

Rest of 42 Projects Mainly C and C++ projects, and Docker
